

NIKHIL CHAGANTI

Data Engineer • SQL • Python • Snowflake • AWS • Power BI/Tableau

Email: chagantinikhil22@gmail.com | Phone: +91 7893697145 | LinkedIn: linkedin.com/in/nikhil-chaganti/

PROFESSIONAL SUMMARY

Data Engineer with hands-on experience building analytics datasets, cleansing pipelines, and cloud-native ELT on Snowflake and AWS. Strong in data quality engineering (validation rules, profiling, reconciliation), KPI design, and dashboarding for business stakeholders. Adept at translating ambiguous requirements into reproducible data workflows and stakeholder-ready insights.

CORE SKILLS

- SQL (Advanced): CTEs, window functions, query plans, optimization, partitioning, incremental loads
- Python: pandas, numpy, data validation frameworks
- Cloud & DW: Snowflake (staging, tasks, streams), AWS (S3, Athena, CloudWatch), Databricks
- ETL/ELT & DQ: ingestion frameworks, schema validation, deduplication, data lineage
- Visualization: Power BI, Tableau, Plotly, KPI design, drill-through
- Versioning: Git/GitHub, CI/CD basics; Agile ceremonies, documentation best practices

EXPERIENCE

Data Engineer — Igate Solutions | Jan 2024 – May 2025

- Improved Snowflake ELT efficiency by tuning micro-partitioning and query pruning, reducing compute usage by nearly 25%.
- Authored reusable SQL models (views/CTEs) to standardize KPIs and business logic; improved report consistency across teams.
- Developed a DQ rule engine (null/threshold/duplication) with observing via CloudWatch; cut bad-record leakage by 40%.
- Maintained next-step action items and requirement updates in Confluence while capturing daily progress and blockers through JIRA reports to keep all teams aligned.
- Built analytics workflows and preprocessing for large structured and unstructured datasets.
- Created visual dashboards using Tableau/Plotly and automated reporting workflows for stakeholders.
- Performed end-to-end data cleaning, EDA, sentiment analysis, and predictive modeling for research use cases.
- Delivered actionable insights by validating data quality, engineering features, and documenting analytical findings.
- Mentored junior researchers on SQL best practices, version control, and reproducible analytics notebooks.

Programmer Analyst (Internship, Full time)— Cognizant Technology Solutions, India | Feb 2022 – Oct 2022

- Developed SQL-based ETL workflows using Informatica PowerCenter to process high-volume banking datasets.
- Implemented data quality (DQ) rules including null checks, threshold validations, referential integrity checks, and anomaly detection.
- Worked on data warehouse environments, performing staging, transformation, and loading of analytical tables.
- Ensured pipeline reliability and compliance for high-regulation financial systems, improving data accuracy and audit readiness.

SELECTED PROJECTS

Cloud Analytics Pipeline — AWS (S3, Lambda), Snowflake, SQL

- Architected and implemented scalable data pipelines integrating AWS Databricks, S3, and Snowflake to support high-throughput real-time analytics.
- Led optimization of SQL-based ETL workflows for large datasets, reducing processing time by 30%.
- Built real-time dashboards with Power BI, Tableau.

Road Accident Prediction and Visualization System — Python, ML, Tableau/Plotly

- Developed a spatial-temporal model to predict high-risk road accident zones from 145K+ records.
- Applied clustering and anomaly detection for location-based risk modeling.
- Built interactive dashboards with Dash to help public agencies visualize accident hotspots and trends by time and region.
- The project was used in public safety awareness and featured in a research showcase.

E-Commerce Review Insights — SQL, Python, Tableau

- Analyzed 189K+ product reviews, achieving 88% accuracy using machine learning models.
- Classified sentiments into positive, negative, and neutral to support product performance strategies.
- Visualized insights using word clouds and Tableau dashboards, identifying key sentiment drivers.

Banking ETL & DQ Framework — Informatica, SQL

- Built and secured ETL workflows for financial transactions in a high-compliance banking environment.
- Developed phishing and cybercrime detection modules using pattern analysis of email and log data.

ACHIEVEMENTS & IMPACT

- Letter of Appreciation from Cognizant leadership for delivery to a Fortune 500 banking client.
- Reduced recurring analytics refresh time from hours to minutes using incremental SQL models and caching.
- Drove 40% reduction in data quality incidents via centralized rules and proactive monitoring.

EDUCATION

M.S., Information Systems — University of Maryland, Baltimore County (CGPA: 3.93/4.0), 2024

B.Tech, Electronics & Communication Engineering — SRKR Engineering College (CGPA: 8.23/10), 2022

CERTIFICATIONS

- AWS Certified Data Engineer – Associate
- Oracle Database SQL Certified Associate
- Cisco Certified Python – Programming Essentials
- IBM Certified – AI Fundamentals
