PROFESSIONAL SUMMARY

Results-driven Software Engineer with a strong foundation in frontend development, data engineering, and cloud-based analytics. Proficient in building responsive user interfaces using ReactJS, HTML, CSS, and experienced in designing scalable data pipelines and dashboards using AWS (S3, Redshift, Glue), Power BI, and Tableau. Adept at implementing ETL workflows using Informatica Power Center and managing large-scale Data Warehouses to support business intelligence and reporting. Skilled in applying data mining, NLP, and machine learning techniques to extract insights and drive innovation.

TECHNICAL SKILLS

Programming Languages & Tools	Python, C, R
Database Management	MySQL, ETL pipelines, Data Warehouse, PL/SQL
Data Analysis	Data Mining, Machine Learning, Power BI, Tableau, Weka, NLP Technologies, Informatica Power Center
AWS Cloud Technologies	S3, Redshift, Lambda, Glue, EC2, API, Snowflake, IAM
Web Technologies	HTML, CSS, React JS, JSON, JQUERY, UI
Tools	Jupyter Notebook, Visual studio Code, GitHub
Frameworks	PySpark, SparkSql, Databricks, Hadoop, Scikit-Learn, Apache Spark, Pandas, Tensor Flow, Numpy, Pytorch, Map Reduce, SAS Framework, Seaborn
Methodologies & Cloud	SDLC, CRM, ERP Systems, GCP

PROFESSIONAL EXPERIENCE

IGATE SOLUTIONS – Software Engineer – Frisco, Texas, United States

(January, 2025 – Present)

- Developed and maintained a dynamic, responsive front-end user interface using **ReactJS**, **HTML**, **CSS**, and **JQuery**, improving customer interaction and increasing engagement by 30%.
- Designed and integrated RESTful APIs using **JSON** for smooth data communication between UI and external services, enabling real-time updates and seamless user experiences.
- Enhanced client-side performance by optimizing rendering logic and leveraging **React hooks** and **component reusability**, reducing page load times by 40%.
- Created interactive dashboards and visualizations using **Power BI** and **Tableau** to support real-time decision-making for internal analytics teams.
- Streamlined data presentation by integrating **AWS Redshift** and **S3** for secure and scalable data access, enhancing the speed of data retrieval and UI rendering.
- Implemented robust data handling and transformation flows using **ETL pipelines** and **AWS Glue**, ensuring accurate and clean datasets for front-end display and analytics.
- Utilized **Git** for version control and collaborative development, maintaining high code quality and smooth CI/CD deployments across cross-functional teams.

COGNIZANT TECHNOLOGY SOLUTIONS – Programmer Analyst – Hyderabad, India

JP Morgan Chase (February, 2022 – October, 2022)

- Gained hands-on experience working on the JP Morgan Chase investment banking project, contributing to data security initiatives.
- Completed specialized training in data security, enhancing understanding of risk management in financial services.
- Utilized **Informatica Power Center** to design and manage ETL workflows, ensuring efficient data extraction, transformation, and loading from multiple sources into the **Data Warehouse**, supporting secure and scalable reporting systems.

- Acquired foundational skills in SQL, ETL processes, and AI & Analytics (AIA) domains, applied in real-world projects.
- Strengthened client management and vendor relations skills, contributing to successful project outcomes.
- Developed expertise in phishing mail detection and cybercrime analysis as part of the CDB AI & Analytics service line at Cognizant.
- Earned EF SET certification, demonstrating proficiency in English language communication and analysis.
- Completed a 9-month tenure with recognition and a service letter from Cognizant for outstanding performance.

EDUCATION:

- **Master of Science in Information Systems** - CGPA – 3.93/4.0
University of Maryland, Baltimore County, Baltimore, MD (January, 2023 – December, 2024)
- **Bachelor of Technology in Electronics and Communication Engineering** - CGPA – 8.23/10.0
SRKR Engineering College, Andhra Pradesh, India (2018 – 2022)

CERTIFICATIONS:

- AWS Certified Data Engineer – Associate
- Oracle Database SQL certified - Associate
- Cisco Certified Python – Programming Essentials in Python
- Certified in Artificial Intelligence Fundamentals by IBM Watson

PROJECTS:

- **Tweet Categorization using Sentimental Analysis**
Developed a sentiment-based recommendation system to analyse and categorize 1.6 million tweets into positive, negative, and neutral sentiments. Leveraged data preprocessing techniques, including removing null values and duplicates, and applied NLP methods like lemmatization and stop-word removal. Achieved 85% accuracy in sentiment classification using text analysis and visualization tools, such as word clouds and sentiment counts. Designed an interactive dashboard to visualize sentiment distribution, trends, and key insights using Matplotlib, Seaborn, and Plotly, enhancing data-driven decision-making.
- **Road Accident Predicting System using Data Mining**
Designed a data-driven system using a 2012 dataset of 145,571 records from Great Britain to predict accident-prone areas with 90% model accuracy. Outlier removal refined the dataset to 143,178 rows, enhancing prediction precision. Conducted spatial analysis to identify high-risk zones and proposed measures like speed limit enforcement to reduce accidents. Developed a dynamic dashboard using Plotly, Dash, and Jupyter Notebook to provide interactive visualizations of accident hotspots, severity distribution, and time-based trends, enabling real-time data exploration and decision-making.
- **Sentiment Analysis of E-Commerce Company Product Reviews**
Implemented a Decision Support System (DSS) to analyse 189,874 product reviews from Company, achieving 88% accuracy in sentiment classification. Utilized TextBlob for sentiment scoring and trained models including Logistic Regression, LinearSVC, Random Forest, and Multinomial Naive Bayes. Logistic Regression provided the highest accuracy in classifying customer feedback. Generated a word cloud using Weka to visualize the most frequent and impactful terms in customer reviews, enhancing insights into key sentiment-driving words.
- **Customer behaviour Analysis with AWS Data pipeline**
Developed a data pipeline using AWS services to analyse customer behaviour for an e-commerce platform. The pipeline involved extracting raw transaction data from Amazon S3, processing it with AWS Glue for data cleaning and transformation, and storing the results in Amazon Redshift for querying. Used SQL to analyse customer purchasing patterns and generate insights, which were visualized using Tableau. This project improved data processing efficiency, reduced report generation time by 30%, and provided actionable insights into customer preferences and sales trends, enhancing business decision-making.
- **Todo List using React js**
Developed a dynamic To-Do List application using React.js, utilizing useState for state management to handle task creation, updates, and deletion. Implemented component-based architecture with props, enabling reusable and maintainable UI components such as TodoItem, TodoForm, and TodoList. Enhanced UI with FontAwesome icons, integrating interactive elements like task deletion (faTrash) and completion toggles (faPenToSquare) for an intuitive user experience. Utilized UUID for unique task identifiers, ensuring each task has a distinct key to avoid rendering issues and improve application performance. Leveraged React hooks (useState) to manage task states dynamically, enabling smooth state transitions without reloading the page.
